

Advent eVidence

DIGITAL EVIDENCE MANAGEMENT FOR PROSECUTION OFFICES

MANAGE EVIDENCE

FOR EVERY CASE WITH SECURITY AND EASE

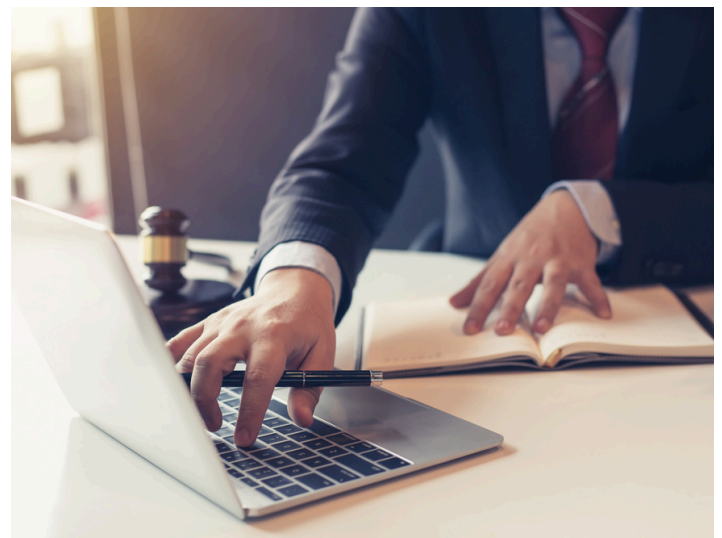

The Advent eVidence platform allows prosecutors to consolidate, organize and prepare all digital evidence efficiently and effectively around criminal cases.

Advent eVidence is a browser-based program that incorporates over twenty years of advanced document management technology development. To ensure the highest level of security information is stored on the Microsoft Azure Cloud. The platform also ensures security on the user level, supporting prosecutor user authentication via network protocols, like Active Directory, removing the need to manage passwords within the application. Users can upload almost any type of evidence into cases, as well as request evidence uploads from law enforcement via secure upload links dynamically created for participants in the case.

The Advent eVidence platform handles all file and document types from the digitization of paper and text-based documents, audio files, video files and everything in-between. Integrated file management tools allow users to increase efficiency with faster document entry and retrieval. Files are stored in a central, consolidated repository with full case and contributor details for chain of custody audits. Giving prosecutors a single secure online source to organize and manage everything their cases require.

KEY FACTS

- Organize, prepare and share evidence efficiently and effectively
- Fully configurable to comply with the policies and regulations of your organization
- Cost plus pricing allows you to control costs by regulating data storage to meet your unique budget and data volume needs
- Securely hosted on Microsoft Azure Cloud
- Create secure and unique upload links for contributing agencies
- Track and report activity on individual files within a case
- Easily fulfill discovery, FOIA or open records requests through secure download links
